

Martex Global Enterprise LLC Releases Solar Powered HuntVe

Fort Worth, TX (September 2009) - Martex Global Enterprise, LLC is excited to announce the release of its all new solar powered charging system for the HuntVe line of vehicles. Designed for an output up to 200+ Watts, this state of the art solar top system is designed to add up to 30% to the drive time of the HuntVe. "It is a significant advancement in solar technology that we are now able to bring to our customers," say Geno Petralli, HuntVe national sales manager. "Extending the range of an electric UTV like ours gives us significant advantages to other electric powered vehicles that can not offer this option."

The integrated solar top is designed to supplement the existing battery pack. Plugging into the electrical grid will still be required in most cases but run times will consistently exceed 30 miles in off-road field conditions. Made of durable tempered glass, the panels are as tough as an automobile's windshield. Life expectancy of the panels is designed to match the life of the vehicle.
